

How can I start GECAMed

Open a web browser of your choice. Enter the following address in the browser:

```
http://localhost:8080/gecamed
```

You will see the GECAMed start page. Click on the “Start GECAMed” image and the application will start.

If you are not currently working on the server, you must replace the localhost with the address of your local server

```
http://mylocalserver:8080/gecamed  
or  
http://192.168.0.2:8080/gecamed
```
