

# Jasperreport Debug messages

Jasperreport outputs quiet a bit of debug messages when generating print objects. To get rid of them, edit the `log4j.xml` file in your `jboss/server/default/conf` directory and add the following lines in the Limit Categories section of the file.

```
<!-- Limit the net.sf.jasperreports to WARN since logging to DEBUG floods  
your log with unnecessary messages -->  
<category name="net.sf.jasperreports">  
    <priority value="WARN"/>  
</category>
```
