NEXT RELEASES

Release 2.07.00

Pre-release date: 9/2/20117

More bug fixes and functional changes + a couple of interesting new features.

Major improvement: payment dialog

The payment dialog had a lot of troubles, some more serious than others. This has led in some cases to missing or wrong ledger entries, which can disturb the practice's internal accounting. 7 tickets related to that subject have been fixed.

New Feature: User customizable patient history filters

GECAMed comes out of the box with a fixed set of filters for the patient history ('Full View', 'Diagnosis', 'Letters', 'Files', 'Prescriptions', 'Forms', 'CDA'). Additional *ad hoc* filter criteria can be entered like the type of document, a date range and a text search criteria. However, those *ad hoc* filters could not be saved until now, and no additional filters could be added.

To get rid of these shortcomings, release 2.07.00 introduces fully customizabe filters for the patient history. Doctors can now define their own filters based an a type selection and a text criteria. Full management of all filters, comprising the standard ones, is now possible for a user with admin rights.

I. e., here you can see how a custom filter for the new “Ordonnances Médicales Kinésithérapie” would look like:

See here for more details.

New Feature: Empty the invoice trash

Until now the invoice trash could not be emptied, except with a series of DELETE operations on the DB. Now there is a user level function to do exactly this.

New Option: hide Patient ID

Users have complaint that the GECAMed internal Patient ID is displayed in several places. Now there is an option to hide it again.

New Feature: make bank accounts obsolete

Bank accounts for physicians and the practice can not be deleted once they have been used in a settlement. This new feature allows to hide them in the payment dialog, so that unused or obsolete accounts won't bother anymore during settlement operations.

New Option: disable shotcut keys in patient module

Due to interferences between a voice dictation software and non-customizable short keys in the patient module we decided to introduce an option to deactivate those shotcuts alltogether. See Funktionstasten.

List of track tickets addressed in this release

- 1232 tested OK ⇒ User-configuarable filter tabs in the Patient History
- 1280 tested OK ⇒ New placeholder PATIENT_INFO / [PAT_JOB]
- 1284 tested OK ⇒ Newly created template not shown if list was empty before
